How many kilowatts does the State Grid have in 2025?

As of June 2025, the installed capacity for grid-connected wind and solar power in the State Grid's operating area reached 1.34 billion kilowatts, tripling since the end of the 13th Five-Year Plan and ranking first globally. New energy is now the largest power source in the area, dominating new installations and generation.

Will China's power grid build a record 520 billion yuan in 2023?

BEIJING, Jan. 21 (Xinhua) -- The State Grid Corporation of China (State Grid) pledged to step up investment in 2023, with funds set aside for power grid construction to hit a record high of 520 billion yuan (about 76.81 billion U.S. dollars).

What technologies did state grid develop during the 14th five-year plan?

During the 14th Five-Year Plan, State Grid developed key technologies such as full electromagnetic transient simulation of large power grid and all-domain collaborative security defense system. It built a large scale new energy power grid operation and control system, leading globally in integrating and absorbing new energy.

How has State Grid boosted investment in power grid construction?

The figure was up 4 percent compared with a year ago and marked the fourth consecutive year that State Grid has upped investment in the sector. Last year, the company spent a total of 509.4 billion yuan in power grid construction, attracting over 1 trillion yuan of social investment into the sector, data showed.
