

Colombia exports to large-scale energy storage

Colombia's energy transition also aims to further diversify the energy mix by incorporating wind, biomass, hydrogen, large-scale battery storage, and nuclear energy.

A new regulatory proposal from the Colombian government outlines the technical and commercial rules for energy storage assets. The framework targets both the national grid and remote ...

A 290MW coal plant in Colombia will be entirely converted into a renewable energy site using a combination of solar PV and battery storage.

Colombia, like many countries, is experiencing an increasing energy demand as well as challenges related to security of supply.

The United States was the primary destination for Colombia's crude oil exports in 2021, receiving 180,000 b/d. Other main destinations included China, Panama, and India.

The new mechanism introduces technology-specific products, extends commissioning deadlines to 2035, and formally recognises energy storage as a core asset for power system ...

Countries that rely heavily on imported energy may be vulnerable to supply disruption from external events such as the Covid-19 pandemic and the war in Ukraine. In countries that export large ...

The Energy Transition Law expanded policy actions and tax benefits to energy efficiency and low-carbon energy technologies, including geothermal, carbon capture and storage (CCS), and hydrogen.

Colombia transforms sugarcane waste into rural energy, for power and biofuels that stabilize the grid and support communities in Cauca.

Accelerate the planning of utility-scale storage solutions to not only prevent intermittency risks from FNCRE but also increase existing transmission-line capacity.
