Attach a step-down transformer to the left side of a perfboard. A step-down transformer is a small electrical device that has wires with differing numbers of coils to lower the voltage from a supply to the output. For a simple converter circuit, look for a transformer that's rated for at least 13 V so you can drop the input power lower. Place the transformer on a piece of perfboard... You can buy transformers and perfboard from an electronics supply store or online. If you want to raise the voltage, then you can use a step-up transformer instead.
