

Digital trunking communication system base station

BTX, a multimedia communication and control system based on IP network, integrates DMR trunking, video, monitoring, text, voice dispatch, etc. With soft-switching technology and distributed ...

The Hytera DMR Trunking Pro logically consists of base station system, service terminal, bearer network and mobile switching office (MSO). One MSO supports up to 100 base station and 800 carriers.

The DMR Trunk- BS mainly works as interface between two communication networks either wired or wireless. This works for trunking feature between different users.

MSO is the switch and control center of the DMR Trunking Lite system. It also provides interfaces for different applications and interconnections with other systems.

Powered by cutting-edge technology and versatile functions, DMR Trunking Pro base station offers refreshing communication experience with ultimate reliability and scalability.

Through IP network interconnection technology, it supports the access and networking of various types of base stations, including integrated base stations, telecom-grade base stations, stackable base ...

With advanced design, Hytera DMR Trunking Lite Base Station is provided with special features such as smooth migration, flexible networking and rich functionalities.

These multi-mode DMR trunking terminals support analog and DMR in conventional mode, as well as MPT and DMR in trunking mode, giving them the flexibility to adapt to your individual system's ...

TBS6000 digital trunking base station system supports DMR professional digital trunking standard to realize the wide area network coverage, and supports diverse functions such as voice trunking ...

The Tait TB9300 Base Stations are conventional or trunked, IP connected, digital base stations for DMR Tier 2 or Tier 3 networks. The functionality of these base stations allows for flexible network designs ...
