

Electric SUV with photovoltaic panels

We design for independence and convenience. We create solar charging systems for electric vehicles that can drive off-grid and into all of life's adventures.

The batteries in these cars can charge from a regular household outlet like an electric car, but using solar panels is better for both the environment and your wallet.

Electric vehicles are known for plugging in - but one startup wants them to simply soak up the sun instead. Bako Motors is building compact electric cars and cargo vans with solar panels...

Solar-powered electric cars sound like a perfect solution, but how viable are they now, and when might your car get a top-up just by sitting outside?

In this blog, we'll see some of the top electric vehicles with solar roofs. A car running completely on solar energy is still a pipeline dream, but rooftop panels are now being featured on ...

Aptera is the world's first Solar Electric Vehicle that requires no charging for most daily use - giving you the freedom to do more with less impact on the planet.

Let's look at ten cars with solar panels. The Hyundai Sonata Hybrid introduced an optional solar panel roof in 2020. This feature allows the solar roof to charge the car's battery, providing...

The following ten vehicles feature solar panels, enabling them to gain range simply by being parked outdoors. Though solar charging rates are slow, the long-term savings and ...

A forward-looking solution some automakers are implementing is the use of solar panels on the roof of their EVs, along with an inverter inside the vehicle to charge the batteries.

Kia has unveiled details about its first electric SUV, which uses solar panels to boost its electric charge. After debuting its first electric vehicle, the EV6, with record sales last year,...
