As temperatures rise again in late spring, humidity levels begin to climb, culminating in a notable increase back to 64% by December. This cyclical pattern reflects Gaborone's transition from ...

Overview Climate of Botswana Key trends Impacts of climate change Climate finance The climate of Botswana is arid to semi-arid with warm winters and hot summers and the rainfalls are highly unpredictable. Rains mostly occur from October to April. The winter season is mostly dry and sunny, mild during the day but cold at night, especially in the center and south of the country. This is normally around the months of May to August. The summer season which is normally from November to March, is hot and moderate...

To assess if human-induced climate change influenced the heavy rainfall in the region, we first determine if there is a trend in the observations, available since about 1950, that aligns with ...

Local researchers developed Climate Risk Narratives in a 2017 workshop where the possible impacts of climate change in Botswana provided by the FRACTAL team informed the researchers' vision for the ...
