To further increase the efficiency of trellis-based growing systems, this study investigates novel low-cost, open-source, sustainable, wood-based PV racking designs for agrivoltaic applications.

Many of these cultivars showed increased yield with partial shading with semi-transparent solar photovoltaic (PV) systems. To further increase the efficiency of trellis-based growing systems, this ...

The results indicate that these racking structures have enormous promise both agriculturally and energetically. If employed on only grape farms inside Canada, 10 GW of PV potential is made ...

Previous wood-based racking configurations have primarily focused on conventional PV mounting structures. The current study is the first comprehensive evaluation of a PV racking design ...

In this study, we propose the symbiotic integration of photovoltaic (PV) systems into previously built vineyards structures, so as to reduce land intervention, visual impact and costs while ...
