

Huang Wenjun, Vice President and Chief Engineer of SUPCON Solar Energy stated milestones of the Hangzhou Pilot Project, and reported the progress of the 50MW Solar Energy Tower-type Heat ...

As an integral part of the "Three Gorges of Land Scenery" in Jilin Province, the commencement ceremony of the project was held on October 28, 2021. Among them, the 100MW ...

HTC has established the leading position of enterprises in the field of research and development and manufacture of industrial steam turbines with variable speed and variable operating conditions in China.

HCTC have five series more than 400 type steam turbines including N series, NR series, C/BN series, B series, CB series. N series steam turbines are single casing & single shaft or double casing & double ...

Five simulation tests were carried out under the disturbances that the solar tower power plant may encounter under various solar irradiations and output electrical loads. Both dynamic and static ...

According to Hangzhou Steam Turbine, the steam turbine offered to Supcon project will use the two-cylinder design. High pressure cylinder will adopt the reaction technique from Siemens, ...

As well as developing their own projects, Cosin Solar supplies tower CSP equipment, solar receivers, heliostats, solar field control systems, and automated cleaning vehicles.

#183; The generation data showed that the generation variations between different seasons are small, which shows the advantages of utilizing tower CSP power plant in high latitude region.

Since its formal construction on October 25, 2016, the construction and purchasing work of Supcon 50MW solar tower project has been under steady advancement. Except for the confirmed steam ...

This paper examines the performance of the solar power tower system using molten salt as the heat transfer fluid - steam turbine (ST) - ORC power plant under various working conditions.

# Hangzhou Steam Tower Solar Power Generation
