

# How to install photovoltaic solar bracket

Why should you install a solar panel bracket?

The purpose of installing the bracket is to better fix the solar panel. If there is a more convenient and feasible method to fix the solar panel, PVMars will definitely recommend it to you, and effective solutions are based on solar panels' characteristics and your on-site installation environment.

How to install solar panels on a tile roof?

The rails carrying the solar panels will also be attached to the tile roof hooks. You might say that your own roof has no wooden strips. Generally speaking, there must be a relatively sturdy material on the top beam of the roof. This material acts as a skeleton to support the roof tiles.

How to build a solar panel roof?

According to the shape of your roof, find 4 support points, and then steel pipes are erected. The links between the points are elevated to form an additional layer of the solar panel roof. In this way, functions such as activities under the solar panel, placement of items, and heat insulation can be achieved.

Can we choose a foldable/flexible solar panel?

Yes, we can choose a foldable/flexible solar panel. This kind of solar panel can design the original frame as hollow. This is so that we can use rope or other linear objects to pass through the hollow and tie it to the pole. There is a video below for reference. The purpose of installing the bracket is to better fix the solar panel.
