In this article, a closed-loop voltage control method is developed based on the d -axis reference current to maximize the voltage extraction from dc-link voltage while minimizing the above ...

These systems developed using a closed loop voltage control strategy and produces a voltage having constant amplitude and frequency, which helps to improve the overall output power ...

It describes the proposed methodology which uses a PV panel, MPPT controller, boost converter, voltage source inverter (VSI), filter, and transformer to inject current, active power, and reactive ...

In this study, a control strategy combining the three closed-loop control with an iterative-based RMS algorithm is proposed for addressing the voltage drop and slow response problems of single-phase ...

strategy of the inverter must guarantee its output waveforms to be sinusoidal with fundamental harmonic. For this purpose, close loop current control strategies such as H² repetitive controller, dual closed ...

In this paper, a high gain DC-DC converter is implemented in order to convert the voltage obtained from solar cells to a high voltage at desirable limit and it will optimize low voltage, ...

This paper innovatively uses script module programming of plect software to build the SVPWM modulation module which drive the three-phase inverter while realizing the closed-loop control.

Although Current Regulated Voltage Source Inverter operates as a CSI, it does not use large dc inductor and filter capacitors, hence it has lower weight, volume and cost and faster dynamic response.

ABSTRACT The primary cascaded control loops and the phase-locked loop (PLL) can enable voltage source inverter operation in grid-forming and grid-following mode.

To prove the supremacy of the 5-L switched capacitor (SC) inverter, a comparative analysis is performed. A 3.424 kW PV system is used to test the feasibility of the 5-L SC inverter.
