How to install a photovoltaic system?

Photovoltaic system modules can be installed on a building's roof, its facade or on the ground. During the initial survey, the installer will check the feasibility, taking into account: the correct exposure and incline of the surface, which must be facing southwards, southeast or southwest. The incline should be between 10°; and 35°;

Can a photovoltaic system be installed on a roof?

However, installation does require prior communication to the grid operator of the "Unified application form for the construction, connection and operation of a small photovoltaic system incorporated onto the roof of a building";.

Can a photovoltaic system power a home?

Yes, the photovoltaic modules can capture every small amount of solar irradiation and convert it into usable energy to power a home, as long as the simple rules relating to the installation - the inclination and orientation of the panels - have been followed. What happens to my system in the event of a power failure?

Are stand alone photovoltaic systems cost-effective?

Although stand alone photovoltaic systems are technically feasible, maintaining contact with the electricity grid, when present, is always cost-effective. Stand alone systems are very expensive if they are to achieve the same levels of service as a grid-connected system; moreover, they cannot benefit from net metering.
