

Latest market trends of photovoltaic energy storage sector

The IEA PVPS Trends in Photovoltaic Applications 2025 report provides comprehensive data and analysis on global PV deployment, technology, and market evolution from 1992 to 2024.

In 2024, 24 states and territories generated more than 5% of their electricity from solar, with California leading the way at 32.4%. The United States installed approximately 31.1 GWh (12.3 ...

Wondering how solar energy storage will evolve by 2025? This article breaks down the latest projections, technological breakthroughs, and market opportunities - all explained in plain language.

Solar accounted for 58% of all new electricity-generating capacity added to the US grid through the third quarter of 2025, with more than 30 GW installed. Solar and storage, combined, ...

The U.S. energy storage industry has entered a "new phase of sustained, high-volume deployment," according to the inaugural Energy Storage Market Outlook Q1 2026 released by the ...

In parallel, swift population expansion and urbanization are notable trends in the developing regions, leading to an escalated demand for electricity. In addition, Asia Pacific is ...

The global solar energy storage market was valued at USD 93.4 billion in 2024. The market is expected to reach USD 378.5 billion in 2034, at a CAGR of 17.8%, driven by growing energy demand across ...

Utility-scale front-of-meter projects controlled 70.63% of the 2025 energy storage market size, underpinned by renewable-integration mandates and capacity-market paybacks; yet EV ...

Key trends shaping the industry include advancements in energy storage integration, the rise of hybrid solar systems, and the adoption of building-integrated photovoltaics (BIPV), all contributing to a more ...

News from the photovoltaic and storage industry: market trends, technological advancements, expert commentary, and more.
