

Photovoltaic Panel Dragon Skeleton

Google and SunStyle created the dragonscale solar roof, a highly textured, prismatic glass solar roof shingle with a unique coating technology.

The dragonscale skin is made up of 90,000 silver solar panels with the capacity to generate nearly 7 megawatts of energy.

Drawing from the traditional slate shingle roofs of the Swiss Alpine region, the dragonscale pattern of the solar roof lays flat on any roof, to offer protection, functionality, and harmonious...

The unique "skin" design comprises 90,000 silver solar panels with the capacity to generate 7 megawatts of energy, Google said. Flexing to match every contour, the skin extends ...

Its most distinctive characteristic is its "dragonscale" solar skin, which uses 50,000 solar panels for energy generation and delivers a building appearance for the future.

The Google Bay View campus aims to achieve 100% carbon-free energy by 2030 using its dragon-scale solar skin. It draws 40% of its energy from seven megawatts generated by solar panels, forming part ...

This unique roof system utilizes 50,000 solar panels arranged in a visually striking vertical stacking pattern that mimics the scales of a dragon. The result is not just an eye-catching ...

The traditional slate and shingle roofs in the Swiss Alpine region inspired the design of the diamond-shaped dragon-scale pattern of these solar tiles. This installation principle guarantees ...

With Bay View, a first-of-its-kind building-integrated solar panel called "dragon scale" was developed to create a seamless design.

Let's face it - most solar panels look like they were designed by a colorblind engineer. But what if your rooftop could harness the sun's power while channeling the majesty of ancient Chinese dragons?
