

# Price of solar power generation villa for self-use

What is a fully solar powered house?

A fully solar powered house is a residential property that generates 100% of its electricity needs through solar panels and battery storage systems, operating independently from the traditional electrical grid or using it only as backup.

How long can a solar system power a home?

According to the NREL, a small solar system with 10 kWh of battery storage can power the essential electrical systems of a home for three days in parts of the US and in most months of the year. Essential electrical systems do not include electric heating or air conditioning, which require massive amounts of electricity.

What is the relative cost of solar energy?

Another measure of the relative cost of solar energy is its price per kilowatt-hour (kWh). Whereas the price per watt considers the solar system's size, the price per kWh shows the price of the solar system per unit of energy it produces over a given period of time.  $\text{Net cost of the system} / \text{lifetime output} = \text{cost per kilowatt hour}$

What are the benefits of a fully solar powered house?

The key benefits driving this trend include dramatic reductions in long-term energy costs, complete protection from utility rate increases, enhanced property values, and the satisfaction of achieving true energy independence while significantly reducing your carbon footprint.
