

The German-Namibian collaborative project PROCEED is investigating options for an efficient, sustainable and renewable energy-based power supply in Namibia via so-called island grids.

This paper therefore presents firstly general challenges for off-grid electrification and subsequently illustrates the effects in Namibia on the example of two off-grid areas in Gam and Tsumkwe.

In this paper, we unfold the employment of two divergent approaches, requirements elicitation and community-based co-design, in an attempt to determine and advance green energy inclusion and innovative ...

Stand-alone microgrid hold a primary solution for electricity and water supply in remote areas access to National grid is not possible. This paper presents a detailed optimal sizing and economic ...

In this paper, a review of recent developments in rural electrification through micro-grids is presented. This work first lays the background on the challenges hindering the mass deployment of ...

The German-Namibian project consortium will carry out an analysis of the energy demand and the possibilities for establishing an energy supply in rural areas of Namibia. The project's main priority is to conduct case ...

While in some instances interconnecting existing microgrids will likely make financial sense, it is unclear how much impact these transmission projects will have in remote Alaskan communities, according to Peter ...

Alongside solar-home systems and micro-grids in rural Namibia, the hybrid solar off-grid systems in Tsumkwe and Gam are among the largest in sub-Saharan Africa.

These insights are crucial for evaluating the effectiveness of mini-grids in the African context and understanding their role in advancing rural electrification.

A careful assessment is necessary for planning the microgrids, which can be tested using a faithful hardware-in-the-loop simulator. The idea of this thesis is to develop a rural microgrid in Namibia utilizing typhoon HIL.

In this paper, a review of recent developments in rural electrification through micro-grids is presented. This work first lays the background on the challenges hindering the mass deployment of this ...
