

Rural photovoltaic panels steal electricity

Rural community resistance to solar development is expressed at the focal point of county zoning approval, with citizen testimony raising concerns over negative environmental and ...

Solar energy is depleting farmlands of their rich soils in the U.S. Midwest. The solar industry is moving into the U.S. Midwest, drawn by cheaper land rents, access to electric ...

In debates about renewable energy, it is often claimed that installing solar panels on farmland renders it unusable for agriculture - taking away precious space needed for food production.

Solar panel theft is quietly devastating farm operations across the country. As more agricultural businesses invest in renewable energy to power irrigation systems, monitoring ...

Unfortunately, what should be a virtuous initiative is giving rise to a new crime wave, with police data showing a staggering 48% rise in solar panel and cabling theft from 2021 to 2022.

Agrioltaics is a practice allowing the synergistic installation of solar arrays on farmland. Panels can provide beneficial shade to crops and livestock, reduce evaporation and soil erosion, and ...

Currently, there are several ways solar panels can be installed to complement agricultural activities. Fixed vertical or tilted panels provide partial shading for crops and vegetables, protecting ...

With solar farms, wind erosion can cause problems when wind-blown soil ends up on the surface of panels, reducing their electricity output and possibly leading to permanent damage.

Researchers found that as of 2021, there were at least 800 local zoning restrictions related to solar development. At least 22 counties in nine states have set limits on the number of ...

In May 2021, Surry County's Board of Supervisors approved the construction of a 240-megawatt solar farm that spans 1,750 acres across Virginia's Surry and Isle of Wight counties. Rows ...
