

Super quiet generator for sale

Is a Quiet Generator a good choice?

Quiet generators can reduce the amount of noise produced by a generator to such a degree that your ears are no longer at risk. However, there are smaller canopied generators that are effectively silent, producing only a quiet humming sound. If you don't want the sound of a generator disrupting your peace and quiet, they may be the best bet for you.

Is a super silent generator safe to use?

A super silent generator uses the canopy to reduce the noise level produced by up to 40 dB, so it's wise to ensure you're getting the noise reduction you need to make the generator safe to use, especially if it will be located in areas close to the public or staff working.

Are all canopied generators silent?

Not all canopied generators are necessarily silent. Most still produce some level of perceivable noise. However, they don't produce enough to cause long-term damage to your ears. Exposure to noises over 85dB can start to do damage to the tiny hair cells in your inner ears, which will lead to hearing loss over time.

Can A Quiet Generator cause hearing loss?

Exposure to noises over 85dB can start to do damage to the tiny hair cells in your inner ears, which will lead to hearing loss over time. Quiet generators can reduce the amount of noise produced by a generator to such a degree that your ears are no longer at risk.
