

The air conditioner in the minibus generator has no wind

When the AC won't run off the generator, first verify the generator's output voltage and frequency meet AC unit requirements. Check the transfer switch to ensure proper power routing from generator to AC ...

When your air conditioning unit fails to run on a generator, several potential issues may be causing the problem. Identifying these causes can help you troubleshoot effectively.

We had unplugged from shore power, started the generator, but the AC's wouldn't come on. When I checked the Magnum control panel, it indicated that I was still inverting from the house ...

When I turn the air off and crank the generator I have no lights on the microwave either so it seems like it is not distributing any power at all. Any advice is appreciated and pardon my lack of ...

If generator power is getting to the coach breaker box and only the air conditioner won't run, then only other thing I can recommend is to install a Micro-Air EasyStart on your air conditioner.

My air conditioning unit works great when I am connected to 30amp service. However when I switch over to my generator it will turn on for about two minutes and shut down.

While the inverter ran the air conditioner without any complaint, I did add a soft start module to the air conditioner to reduce the startup surge. This is one option for you and probably ...

Try starting with the air con at a high temp setting on cooling, but better on a low setting for heating if it has one (they draw marginally less on heating cycle).

Hi all, I have a 2017 Four Winds 22e and when running the generator (with no shore power), the air conditioner won't run. It sounds like it's trying but it's very rough sounding.

My neighbor just came home with a 2006 Winnebago Adventurer. The air conditioners work fine on shore power, but will not work at all off the generator. ... - 2690003
