

The impact of Denmark's solar glass production reduction on

Demand for solar glass in Denmark is propelled by a confluence of powerful, policy-led factors. The cornerstone is the legally binding national target for a 70% reduction in greenhouse gas ...

The reports include negative impacts, for example from Danish consumption, but also positive impacts, for example from Denmark's bilateral cooperation with other countries to help these countries convert ...

This systematic review poses five questions to examine these issues and themes: What alternatives exist to abate the climate effects of glass and thus make the full life cycle of glass more sustainable? ...

Overall, Denmark has set some of the most ambitious renewable energy targets among countries in the European Union, aiming for a 100 percent renewable electricity mix by 2030.

Due to the high share of energy-related CO₂ emissions, electrical melting and hydrogen combustion, or a combination of both, are the most promising options to decarbonize the glass ...

Set a target for Denmark's international climate impact, resulting from the export of energy technology and services, based on technical analysis carried out in co-operation with the Danish business ...

Europe's glass industry is actively working towards the goal of achieving net zero emissions by 2050 - but how will it achieve this, and what progress has it made?

With 10 % of Danish territory renatured, including six new national parks, the tripartite "deal on a green Denmark" - hailed as historic - will have significant impact on Denmark's LULUCF sector.

This study presents a comprehensive techno-economic analysis of diverse decarbonisation pathways for flat glass production, including electrification, energy efficiency, fuel ...
