Are solar panels affordable?

Solar (PV) panels are devices used to generate electricity from sunlight. The affordability of solar panels varies according to factors including type, system size, brand, and quality. The cheapest solar panels are often those of lower quality and from less reputable brands, compromising efficiency and safety.

What is the cheapest type of solar panel?

The cheapest type of solar panel is technically thin-film, which is a flexible material that's ideal for portable solar panels. However, thin-film panels come with a much lower efficiency than average, so they're rarely used for rooftop solar systems.

What is the best type of solar panel?

The best type of solar panel is monocrystalline. They're more efficient than any other panel currently on the market, meaning you'll be making the best use of your roof space. And they have longer lifespans than all their competitors, which boosts their return on investment beyond that of polycrystalline panels or solar tiles.
